

San Pedro Garza García, N.L. may 26th 2026

To Whom It May Concern,

It is my pleasure to strongly recommend Ángel Candelaria, a Mechanical Engineering student at Universidad de Monterrey (UDem), for the Technical Studentship Programme in Mechanical Engineering at CERN.

I have had the opportunity to work closely with Ángel through academic and technical advising, as well as through a collaborative research project focused on lubrication and wear analysis. As part of this work, Ángel and his team carried out a comparative tribological study involving synthetic lubricants and vegetable-based oils.

The project included tribological testing and surface wear characterization using scanning electron microscopy techniques to identify wear mechanisms, roughness profiles, and potential application advantages. Throughout the project, Ángel consistently demonstrated strong analytical skills, technical rigor, attention to detail, and a genuine passion for applied mechanical engineering research.

Beyond his technical competencies, Ángel has distinguished himself through his professionalism, intellectual curiosity, and commitment to continuous learning. His academic background in mechanical engineering, combined with his ability to work effectively in research-oriented and technically demanding environments, makes him an excellent candidate for a highly competitive international program such as this one.

I am confident that Ángel possesses the discipline, adaptability, and engineering mindset necessary to contribute meaningfully to CERN's multidisciplinary teams and high-level technical projects. I recommend him without reservation and encourage you to give his application your highest consideration.

Sincerely,

Atentamente

---
