

May 25<sup>th</sup>, 2026

To whom it may concern,

It is my great pleasure to recommend Juan Ángel Candelaria Rodríguez for the CERN Technical Studentship in Mechanical Engineering. Juan Ángel is a student in the Bachelor's program in Mechanical and Administrative Engineering (IMA) at Universidad de Monterrey (UDEM), currently completing his sixth semester with a GPA of approximately 90–92/100 — a record that reflects both intellectual capability and a genuine passion for engineering and the physical sciences.

From the outset of his studies, Juan Ángel has distinguished himself through exceptional dedication. He holds a full 100% merit scholarship at UDEM, mirroring a similar award throughout high school, where he graduated as valedictorian of his entire technical specialty cohort. These achievements reflect a student who sets ambitious goals and consistently meets them.

His technical profile is broad and impressive for a student at his stage. Proficient in Siemens NX, SolidWorks, Autodesk Inventor, Fusion 360, and HyperMesh, he has applied these tools in rigorous academic projects — from designing and manufacturing fatigue specimens for case-hardened steel to executing tribological tests comparing vegetable and synthetic lubricants. Beyond traditional mechanical engineering, he has shown a strong aptitude for data-driven research: he is currently developing a machine learning model in Python as an Undergraduate Research Assistant, and his team ranked in the top 10% worldwide at the NASA Space Apps Challenge 2025.

Juan Ángel also brings real industrial experience from a technical internship at FRISA Aerospace, where he operated lathes and CNC-adjacent equipment, used precision measurement instruments, and interpreted engineering drawings. He has additionally been selected by UDEM as a peer tutor in mathematics and engineering sciences — a formal recognition of his ability to communicate complex concepts clearly.

He is a driven, collaborative, and intellectually curious individual, with English proficiency at the C1 Advanced (CEFR) level, which will allow him to integrate seamlessly into CERN's international environment. I recommend Juan Ángel without reservation and am confident he will make a meaningful contribution to the program.

Please do not hesitate to contact me should you require any further information.

Sincerely,

---

Dr. Laura Peña Parás

Full Professor, Department of Mechanical Engineering and Electronics

Universidad de Monterrey
